SPECTRUM STREAMING APPS ACTIVATION

To activate additional streaming apps included with your Spectrum TV plan, you must first create an account for each service via your Spectrum account, as these subscriptions are not active by default. You can do this by visiting spectrum.net or using the My Spectrum app, navigating to the TV/Streaming or Manage TV/Streaming section, and selecting Get Started next to the desired app (such as Hulu, Disney+, or Paramount+).

Follow the on-screen prompts to enter your email address and create a unique password for that specific streaming service. Note that if you already have a direct subscription to a service (like Netflix or Paramount+), you may need to cancel it or use a different email address to avoid billing conflicts, as the Spectrum activation is typically for the ad-supported tier included in your TV package.

Once activated, download the corresponding app on your smart TV, streaming device (like Roku, Amazon Fire Stick or Xumo), or mobile device, and sign in using the new credentials you just created. Spectrum credentials (username/password) are generally used only for the initial activation process, not for logging into the apps themselves, except for specific services like ESPN which may use your MyDisney credentials.

You'll need to **activate** each app individually via spectrum.com/activate before you can use it. You can get more help at https://www.spectrum.net/support/category/tv

App included
HBO Max (Basic w/ Ads)
Disney+
Hulu (with ads)
ESPN Unlimited
Paramount+ (Essential)
Peacock Premium (w/ Ads)
